

BioConversion Databank Foundation

NEW WAYS TO USE NATURE TO
REPURPOSE GREENHOUSE GASES

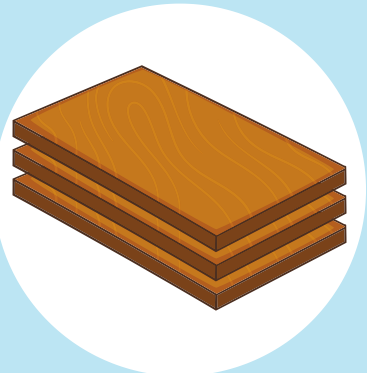

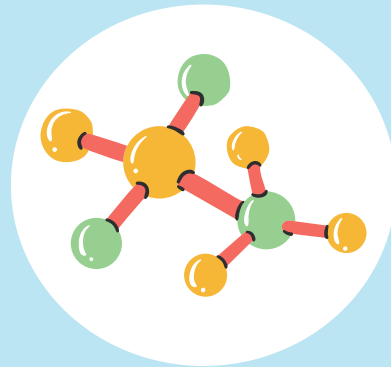

Scientific data, synthetic
biology, genetics, AI and
funding all available at one
stop for entrepreneurs to
use to make usable
byproducts

bio-conversion.org

Our vision is to become a global centre where people access the data of greenhouse gases and nature to fuel bioconversion and create new, useful byproducts

The BioConversion Databank Foundation optimizes what's found in nature. We house organisms and data of greenhouse gases, genetics and synthetic biology. We also have funding so users can use all this to create applications to make new products ranging from building products to pet food. This is the kind of innovation that feeds a circular economy and helps lead us to a carbon neutral world.
